

## SUMMARY PLANTING GUIDE – HORSERADISH

### **SPACING**

- 10" – 12" between plants
- 3' between rows
- Plant at 45° angle with flat end facing up
- Flat end should be about 1" below soil surface

### **IRRIGATION**

- Keep soil moist throughout the establishment period

### **FERTILIZATION**

- Does not need a lot of fertilization
- Fertilize in spring with 5lbs of 10-10-10 per 100 sq ft
- pH: 6.2-6.7

### **WEED CONTROL**

- Regular, manual weeding is recommended
- Consult a local extension before using chemicals

### **SPECIAL CONSIDERATIONS**

- Harvest roots the 2<sup>nd</sup> fall after planting
- If not harvested, divide roots every year or two
