

SUMMARY PLANTING GUIDE – STRAWBERRIES

SPACING

- 12" – 18" between plants unless otherwise noted
- 3' – 4' between rows
- Depth – see our Planting Guide for detailed charts

IRRIGATION

- Water thoroughly after planting
- 1"-2" rainfall or equivalent per week, depending on soil

FERTILIZATION

- Mix ½-1lb of 10-10-10 per 100 sq ft into soil before planting
- Add supplementary fertilizer in July and August
- pH: 6.5-6.8

WEED CONTROL

- Prepare your site prior to planting
- Control weeds *before* they start with a granular herbicide
- Proper mulching will aid in weed control

WINTER PROTECTION

- Cover plants with straw to protect the crowns
- Apply mulch after several good frosts
- Remove mulch in early spring before new growth
